

How to print the Tunnel Route PDF file

- 1) Print sheets 1-14 (i.e. sheets 56/1 to 30/27) on A-4 paper as they exist in the file.
There should be no problem printing these as a batch.
- 2) Print sheets 15-28 (i.e. sheets 2/55 to 28/29) successively on the backs of pages 1-14.
To do this, it is recommended that you treat each page as a separate print item.
Print sheet 15 (which contains pp 2/55) on the back of sheet No1 (which contains pp 56/1),
making sure that the tops of the printed guidebook pages are coincident.
Place this single sheet, now showing 4 guidebook pages, to one side, such that p55 is uppermost
to the right.
Follow this by printing sheet 16 (pp 4/53) on the back of sheet 2 (pp54/3), and laying it on top of
the 'finished printing stack' such that p53 is uppermost to the right.
Continue in the same manner, printing sheet 17 on the back of sheet 3 etc.
- 3) You should finish this stage with 14 sheets arranged such that p29 is uppermost to the right and
p28 uppermost to the left.
- 4) Take this top sheet and fold it in half towards you, short edge to short edge, such that p28 is
folded towards p29. Place the folded but reopened sheet with pp 28/29 facing down and the sharp
crease uppermost.
- 5) Continue folding and placing each sheet in like manner and you should end up with a booklet
with pages 1-56 in the correct numerical sequence,.

Happy printing!
